## Mobile Application

We are continuing the Xamarin AsgardMobile transition, and have added resources to our desktop team to ensure other needs continue to be well-supported. The publish of our first Milestone – Location History Search – is quickly approaching.

We will continue to provide project progress updates through our regular customer Project Management meetings.

As a reminder, Apple is also preparing to publish iOS 11, which will have broad impact on older devices. Apple will be discontinuing support of 32-bit devices, including iPhones 5 and 5C or older, iPod touch 5G or older, iPad 4G or older, and iPad/iPad Mini 1st generation. The following link below provides more information on iOS 11.

<https://www.apple.com/ios/ios-11-preview/>

Please review your current devices and take appropriate measures to be prepared for this upcoming change.

## Desktop Application

### Maintenance

#### Various Fixes / Changes

Small enhancements and fixes, in various areas of the system, arising from automated reporting of system performance and user experience. Affected areas include Stock Items, Inspections, and gathering user IP information.

### Cleans – New Module Underway!

Among the numerous and varied responsibilities of the “back of the house” Resort Operations teams, arguably the most critical is the daily turnover from Occupied/Dirty units to Clean/Available Inventory. This process goes by many names, such as “Breaking Out the House,” “House Breakout,” and “Daily Cleans”. It generally always includes stripping and re-stocking the units, repairing maintenance issues, and cleaning and inspecting for guest arrival.

We have identified an opportunity to replace the legacy, homegrown or purchased, manual or software-based Housekeeping “Cleans” systems/functionality that our customers use today, and to integrate existing work order and billing concepts in Asgard.

With this publish, we are introducing further work behind-the-scenes, in anticipation of more functionality becoming available in the user interface in September.

You can learn more about our plans, and find distributable information, at <http://www.katanasoftware.com/housekeeping-cleans-new-module-coming-soon/>

## Inventory Management

### **Work Order Costs, Enhance Stock Item Details to Include User**

By customer request, when a stock item is used on a work order, we have enhanced the Details for Stock Items in the Costs section to include the Stockroom and the user who added the item.

## Billings

### **Regenerate Billing, when Work Order Description is Updated**

By customer request, we have enhanced the Billings module to regenerate the Billing Description, when the Description of the underlying work order is updated.

For customers who use Billings, the Work Order Description is used for information that needs to be pulled onto their Billing Runs (Owner facing). The expected work flow is that the Work Order Description flows into the Billing Description.

## Assets & Reserves

### **Account List, Reports, Expenditure Summary Report formatting**

We have resolved an issue whereby some sections of the report were overlapping.

## Work Order Management

### **Business Rules, Default Time by Work Order Category**

By customer request, we have enhanced the rules engine to support a unique default Expected Start Time of a Standard Work Order, based on the Model Task Category. For example, Work Orders for pick-up of loaned items will default to begin at Check Out Time.
