AsgardMobile v2.1.532 / Desktop Application v2.12.0

Affected Workflows

AsgardMobile 2.0

Inspections	2
Usability Improvements	3
Testers Wanted	3

Desktop Application

Maintenance and Performance	4
-----------------------------	---

AsgardMobile

Asgard Mobile 2.0

Inspections

Ability to Assign Inspections

Users that have access to the Dispatcher Screen can now assign Inspections.

Ability to Complete Inspections

Users can now review and complete Inspections from the Inspections detail screen, via My Work Orders or the Dispatcher list.

Ability to Create Standard Work from an Inspections

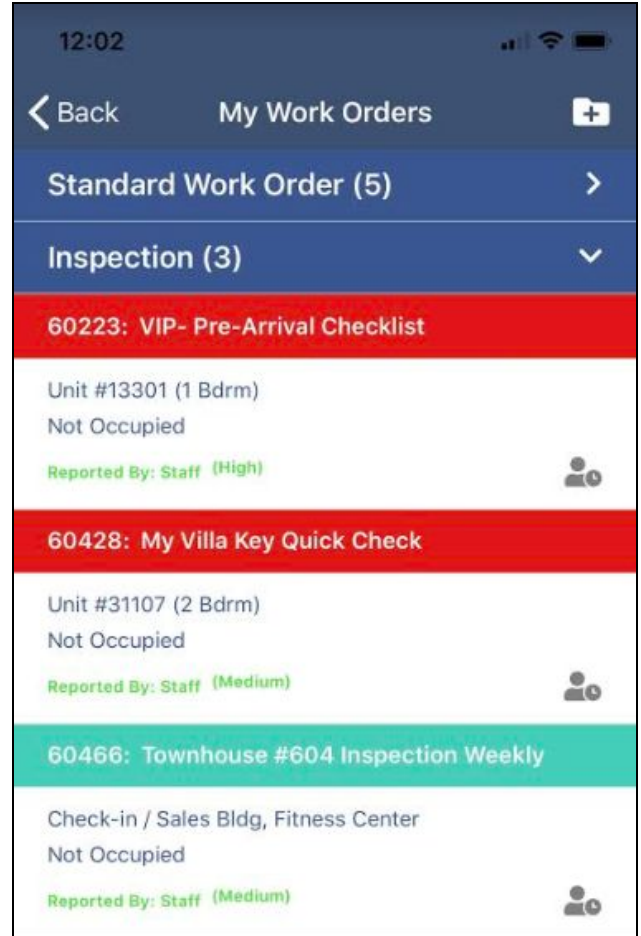

Users are now able to create Standard Work Orders from within an Inspection.

Work Orders created from the Inspection detail will be marked as being created from the specific inspection for historical tracking.

Formatting/Styling Changes to Inspections

We have made stylistic updates to various screens, including but not limited to:

- Inspections Only:
 - Consolidate Inspections Details to Separate Tab
 - Proper Grouping of Tasks by Sublocation
- All Work Order Types, Including Inspections:
 - Ability to Remove/Edit Labor
 - Styling of Labor Details

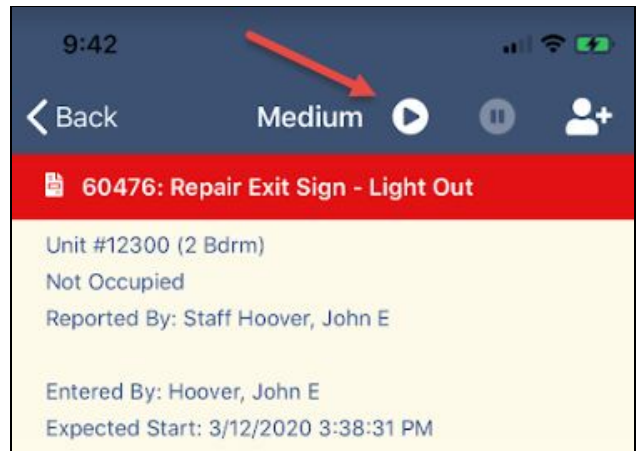

Usability Improvements

One-Click Access to Work Order Details

Based on customer feedback during Beta testing, we have simplified the functionality on the Dispatcher and My Work Orders lists.

- Clicking a Work Order in the list opens that item.
- Dispatcher actions (e.g. Create, Toggle between Inspections/Standard Work Orders) are available in the top right corner of the list view.
- Work Order action buttons have been moved to the right top corner of the work order details screen.

Formatting/Styling to Various Screens

We have made stylistic updates to various screens, including but not limited to:

- Comment Screen Formatting Fix
- UPC Barcode Scanner Styling
- Add/Edit Costs Screen Styling
- Ability to Type in Labor Time
- New Labor Default Work By to Assignee
- Removed Full Path During Location Search

Connectivity Handling

One of the advantages of Mobile 2.0 is more robust architecture to handle limited connectivity. This sprint we have also enhanced the messaging and on-screen indicators for situations in which connectivity (wifi and cellular) is completely unavailable.

Testers Wanted!

The new app can be used in tandem with the existing app. If you are interested in participating, please contact support@katanasoft.com.

We are looking for Manager and Field-Level users interested in early testing with the Beta version of AsgardMobile 2.0. Available functions include Search by Location, Dispatcher functions, and Work Order Create, Edit, and Complete for Standard Work Orders and Inspections. Notifications, Shift Management, and PM functionality are coming in the next update.

Note: At this time, we are inviting English-speaking testers to participate. Localization/translation is on our roadmap to be completed soon!

Desktop Application

Maintenance / Performance

Various Fixes/Changes

We made various enhancements and fixes, in several areas of the system, arising from user reports, automated reporting, and performance records/logs.

Performance Improvements

Change to Storage Approach for Work Order Database ID

We have optimized the storage method, at the database level, for Work Order identifiers. This change is only visible in the database (it does not affect the External Work Order ID visible in the main app) but is expected to dramatically improve storage, speed of transactions, and overall system performance.
