AsgardMobile

AsgardMobile 2.0 - Minimum Viable Product Beta Launch

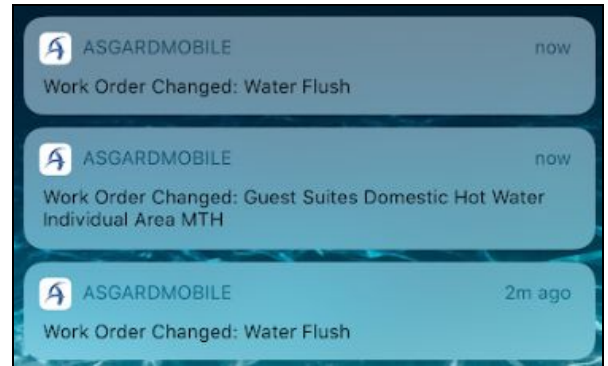

Formatting/Styling to Various Screens

We have made stylistic updates to various screens, including but not limited to:

- Optimized priority order of both My Work Orders and Dispatcher list
- Reintroduced task numbers for both PMs and Inspections
- Further styling of Inspection Tasks for better user experience
- Optimized styling for Home Screen, Location Search, and Create Screens
- Added user's name to Home Screen for transparency
- Enhanced Dispatcher filter functionality for easy reset
- Added a Ready/Break/Ending Shift counter to Home Screen
- Reordered tabs on Inspection/PM/Standard Work Orders for a smoother workflow
- Added Work Order Type to the header of each creation screen
- Clearer Messaging when a Work Order has Changed in the Main Application

Banner & Audible Notifications

Logged in users will now receive audible and visual notifications when they are assigned new work orders. Users will continue to be alerted with the distinct Asgard Woodknocking noise for Guest and Critical work, while all other types of work will have a standard notification tone. The two notification tones will help communicate the priority of the work before the assigned user even looks at their phone.

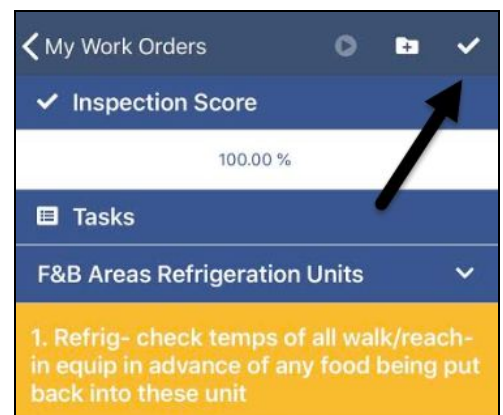

Total Icon Makeover

Based on User feedback, we have upgraded our icon library with easier-to-identify icons. While some icons will remain the same, you will notice throughout the app icons have been changed to more intuitively indicate the actions they are linked to.

Added Start/Complete/Create to Task Screens

For both Inspections and PMs, assigned users can now easily Start/Complete their work from the Task screen as well as easily create ad-hoc work orders. All work orders created from within an Inspection or PM will automatically generate a comment that captures the original Inspection/PM ID from which the new work was created.

Translations are now Complete!

AsgardMobile 2.0 is now available in French, Spanish, and Russian. To experience the fully translated app, the user must have both their Asgard profile and the language setting on their device updated to their preferred language.

To change the language on a device please follow these steps:

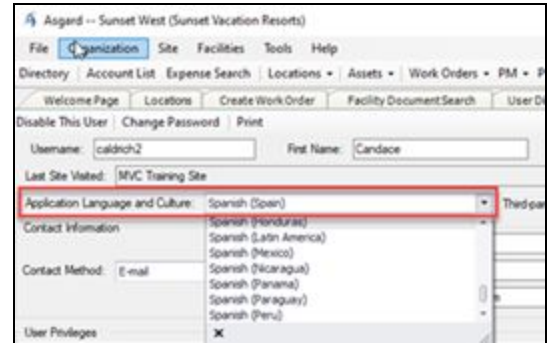

Apple: Settings > General > Language & Region > iPhone Language

Android: Settings > General Management > Language & Input

With appropriate permission, you can change a user's language in Asgard using the following steps:

Asgard: Directory > Select User > Application Language and Culture

If you do not have permission to edit user profiles, please contact support@katanasoft.com for any needed profile changes.

Connectivity Handling

One of the advantages of Mobile 2.0 is a more robust architecture to handle limited connectivity. This sprint we have enhanced the messaging and on-screen indicators for situations in which connectivity (wifi and cellular) is completely unavailable. We have also enhanced connectivity handling when a device is sitting idle for extended periods of time.

Testers Wanted!

We are looking for additional users interested in testing the Beta version of AsgardMobile 2.0, in preparation for launch.

Available functions include Search by Location, Dispatcher functions, and Work Order Create, Edit, and Complete for Standard Work Orders, Inspections and PMs. This is a fully functioning app. Testers will simply use it as part of their normal workflow.

If you are interested in participating, please contact support@katanasoft.com.

Desktop Application

Maintenance / Performance

Various Fixes/Changes

We made various enhancements and fixes, in several areas of the system, arising from user reports, automated reporting, and performance records/logs.
