Mobile Application

We are continuing the Xamarin AsgardMobile transition, and have added resources to our desktop team to ensure other needs continue to be well-supported.

We will continue to provide project progress updates through our regular customer Project Management meetings.

Historical work order search, by Location, is now available in customer beta. Please contact us at support@katanasoft.com, if you are interested in joining our testing community.

Desktop Application

Maintenance

Various Fixes / Changes

Small enhancements and fixes, in various areas of the system, arising from automated reporting of system performance and user experience. Affected areas include Stock Items, and Version Control.

New SMS Gateway

To support increased volume/usage of user-requested SMS work order notifications, we have transitioned to a new gateway (message delivery service). This transition is specifically intended to alleviate quotas imposed by Verizon, which resulted in some messages not being transmitted. There is no action required by end-users/IT.

Dashboards

Performance Optimization

To support faster loading and dynamic reloading when parameters are updated, we have applied code optimizations to the Dashboard.

Rename Inspections Counters, for Clarity

By customer request, we have renamed "Average Inspections Score by User" to "Average Inspection Template Score By User". And, "Average Inspections Score by Inspector" has been renamed to "Average Inspection Template Score by Inspector"

Inventory Management

Stock Item Latency

For customers with large stock item lists, we are addressing reported issues with latency adding new items and transferring items between stock rooms. These changes are expected to have a positive performance impact on all functionality that touches stock item lists, including work orders.

Assets & Reserves

Asset Review (Export), Resolve Error

There are a series of reports available to help manage assets in Asgard. One report that tends to be fairly large, but popular, is the Asset Review (Export). This report exports all Asset instances so you can easily see where every Asset is located. It has been identified that attempting to export this report results in an error – this issue has been resolved.

Business Rules

Add ability to switch to new department, based on Follow on task name

We have created a rule to allow Follow On tasks, at creation, to be a different department than the original task.

Support Auto-Close/Auto-Expire

By customer request, we have added support for rules that automatically close a work order at creation; for example, a guest inquiry at the front desk, which is tracked purely for statistical (not workflow) purposes.
